

The intelligent hardwood floor!

New, innovative hardwood floors with integrated high-tech sensors, which send vital information about your indoor climate to a free APP, are now available. That gives you the information on your smartphone to adjust the environment in your living space to keep the inhabitants healthy and your flooring in perfect condition.

Innovation

Wood is a “living” product of nature that works and breathes – Your new hardwood floor does the same as well.

We have developed the intelligent hardwood floor for you to make you feel comfortable in your home, the most important place for your well-being, safety, and health.

Clear advantages for our customers:

- Healthy indoor climate for better well-being
- Prolongation of your hardwood floor life
- Optimization of heating costs
- Information via smartphone and tablet

The fidbox®

The sensors of the **fidbox®**, installed underneath the hardwood floor, measure the temperature and relative humidity of the wooden floor and can deduce data about the room-climate.

With the free **fidbox®**-APP you are always informed about your room-climate at an early stage.

Some practical suggestions:

- Temperature too low – please turn on your heating!
- Temperature exceeded – please lower your heating!
- Floor humidity too low – please humidify the air!
- Humidity exceeded – please ventilate the air!

The APP gives you optimal control over your room-climate.
